Letter of Transmittal

Department of Agriculture.
State of Florida.

To His Excellency, Jno. W. Martin, Governor of the State of Florida:

Sir:

In accordance with the provisions of Chapter 6828, Laws of Florida, Acts of the Legislature of 1915, requiring the taking of the census of the population of the State for the year of 1925, I have the honor to submit my report of the same.

The result of the census is contained in one volume, which in most part is given in tabular form, showing the general and steady growth of the State's population from 1830 to 1925. These tables show by race, sex and age periods the population of the counties, and other civil and political divisions. The density of the population, both rural and urban, is shown with the rate of increase. The educational division shows the amount of illiteracy together with the number of students now in the colleges and children of public school age.

In accordance with the Laws of Florida, special Act of the 1925 Legislature, requiring the retaking of the census of Duval County, is submitted, a report of same which is included as a supplement to the regular report.

The cost of the census work is well within the limits of the appropriation and the vouchers covering the sums expended will be found in the office of the Comptroller.

Respectfully submitted,

NATHAN MAYO,
Commissioner of Agriculture.

Introductory Notes

In 1821 the Territory of Florida was organized into two counties, Escambia and St. Johns. Escambia County, formerly known as "West Florida," comprised the territory west of the Suwannee River, and St. Johns County, formerly known as "East Florida," included the rest of the territory of Florida. The first Census presented herein, is that taken by the United States Government in the year of 1830.

During that period (1821-1830) the two original counties had been divided and subdivided, making seventeen counties in the first Census. Beginning with this Census, which reported a total population of 34,730, representing two races (18,385 white and 14,345 negro), this report brings up the population development of the State, showing each succeeding Census taken by the United States Government, and those taken by the State where the records are available, to and including the 1925 State Census, which reports a total population of 1,263,549 persons living in sixty-three counties, and representing five different races of people, White, Negro, Indian, Chinese and Japanese. (Many Indians lived in Florida at the time of the first Census, but the record of their population is not available.)

The White and Negro races, which comprises more than 99.9 per cent of the entire population, are very evenly distributed throughout the State. The geographical center of the State is near South Lake Weir, in Marion County, while the center of population is near the town of Oxford, in Sumter County, which town is located within six miles of South Lake Weir, the geographical center. The center of wealth is in Lake County, five miles north of Groveland.

The Censuses presented herein that were taken by the State are for the years 1885, 1895, 1905, 1915, and 1925. All others were taken by the United States Government. This report is called the "Fifth State Census," but it is true that the State has taken the Census population regularly at each ten-year period since, and including 1837, but the records for those taken prior to the year 1885 are not at this time available.

This report is presented in the most part in tabular form, and the tables are so arranged that with the explanatory notes, it is easy to find any information that may be desired, relating to the Census. Comparisons with former Censuses are more frequently made with the 1920 United States Census for the reason that there has been so many new counties organized since the last State Census.

THE FOLLOWING TABLE DEALS WITH INCREASES ONLY—

Total increase, 1920 to 1925	295,079,	or 30.4%
Urban increase, 1920 to 1925	206,453,	or 58.0%
Rural increase, 1920 to 1925	88,626,	or 14.4%
Rural increase: Cities and towns, 1920 to 1925	29,557,	or 22.2%
Other rural, 1920 to 1925	59,069,	or 12.3%

The above tables show that as a result of the growth of the smaller cities and towns, that seventeen cities have been taken away from the rural groups, and been added to the urban group. One has been added to the group of the first class, three to that of the third, two to the fourth, and ten to the fifth or last group.

The city added to the first group is Miami, which was in group two in 1920. St. Petersburg rose from group three, taking a place in group two, thereby retaining an equal number in group two, and leaving only one of the 1920 cities of that group. Four cities—Lakeland, Orlando, St. Augustine and West Palm Beach—each rose from group four to take their places in group three, making five cities for this group. As to group four, one city, West Tampa, has been discontinued, having been annexed to Tampa, and Fernandina fell to group five on account of decrease in population, which leaves only five of the eleven that were in this group in 1920. Five cities—Bradenton, DeLand, Fort Myers, Ocala and Plant City—have grown out of group five and are now in group four; also three cities, Clearwater, Fort Lauderdale and Sarasota, have grown from the rural class through group five and are now in group four, making in all for this group, thirteen cities.

In group five, eight cities remain that were in this group in 1920, one city decreased and fell in this group, and twelve cities—Coconut Grove, Fort Pierce, Lake Wales, Lake Worth, Leesburg, Manatee, Marianna, New Smyrna, Palmetto, Tarpon Springs, Wauchula and Winter Haven—have grown from the rural class, while two cities—Little River and Lemon City—are reported for the first time, and all are in this group, making twenty-three cities for group five.

RURAL CITIES, TOWNS AND VILLAGES.

In the 1920 United States census, this class contained 172 places, with a population of 132,863. Of this number twenty-two places have failed to be reported separately, and nineteen have outgrown the rural class, which leaves only 131 of the 1920 census report accounted for in this census. To thus number there are to be added 62 new places, which brings the total number of cities, towns and villages in the rural class up to 193 places, making a population of 162,420.

Dealing with percentages of increase for the various classifications of population, as given above, and in view of the shifting of places to different classes to adjust increased conditions in population, it is easy to understand the results shown in the following tables:

SUGGESTIONS ON THE TAKING OF THE NEXT CENSUS

The Constitution of the State of Florida makes it obligatory for the Department of Agriculture to take a census every ten years, alternating with the dates on which the Federal Census is taken. If this section of the Constitution is not amended, there will be another census taken in 1935. By that time the cost will doubtless be over $200,000.

Thinking that perhaps our experience in taking the census in 1925 might be of service to those whose duty it will be to take the census in 1935, we are herewith making a few suggestions. To be pointed and specific, we would put down a few ''dont's,'' the observance of which will save a lot of worry:

1. Don't print your blanks which the census enumerators are to use until you have thoroughly formulated your plans and know exactly what you want to cover in the enumeration. To attempt to have letter or figures put in to designate additional matter will not prove satisfactory.

2. Make your instructions complete enough to cover all essential points and so clear that they cannot be misunderstood—if possible.

3. If you try to give occupations in any sort of detail, you will run into infinite classification. We tried to classify by numbers—each number representing a group—but this often led to misconstruction. For instance: Under the head of Clerk, Custodians, etc. It is manifestly impossible to make a classification that would indicate intelligence or education. A Salesman and a Janitor are usually quite different in their equipment. Housekeepers and women keeping house for their families cannot be judged at all by their occupation. Some of these are illiterate, others well educated, some are stupid and others are brilliant. Many a housewife who keeps house for the family is intellectual and educated. The clerk of to-day may be the magnate of to-morrow—without having added to his education or training in the meantime. The income or the property of a person is no criterion as to his education or refinement. In short, vocation is no criterion for classifying people socially or intellectually, except on the superficial scale of the law of averages.

4. Do not fail to instruct your enumerators that they cannot expect their pay until the work has been thoroughly examined. No ordinary office force can give a thorough examination of all reports in a few days. This would be possible if all deputies did good work and followed implicitly the instructions, and a superficial examination would suffice. In one county in which there was not a town of 5,000 a deputy turned

in his work to the county enumerator and made a mistake of 1,000 names in his addition—against himself. The county enumerator did not detect the error. The same thing happened in one of the wards of a city. One would think that an enumerator would know when he was leaving off 1,000 names in one ward which he had taken personally, but in this instance it happened.

In another city, the report was so poorly done that it was shoved off till the last to be straightened out and the enumerators did not get their pay until the fifth month after they had done their work. The careless and slipshod method caused the office force to have to list the whole county alphabetically and then compare them for duplications. This is a time-wasting and expensive process.

Much time can be saved in working up the data if whites and negroes are reported on separate sheets.

Due to the poor hand-writing of some of the enumerators much time was lost in checking their work. The county enumerator should be required to go over all sheets before sending them in and re-copy those that are in bad order.

The use of the ditto mark helps very much in checking, and the enumerator should be instructed to use same whenever possible. Families can be checked much faster if only the surname of the head of the family is written out in full. The same is true in checking the record by States. Families should not be divided on enumeration sheets.

Whenever a town or village is incorporated the census for such should be clearly marked, and no names outside the corporate limits included.

We would eliminate columns 11, 12 and combine 16 and 17, on the census record sheet used, a copy of which is on file in office of Bureau of Immigration. The sheets were ruled for 50 names.

The copy of "Instructions to Enumerators" and copy of Census Schedule sheet used by the enumerators is on file with all census correspondence in the office of Bureau of Immigration, Florida Department of Agriculture.
